

Automotive engineering is more than just fixing cars

As technology in the industry grows and develops, so do the skills required of those employed in it. If you are interested in vehicles, engines and electrical systems, working with tools, machinery and equipment, problem solving, diagnosing faults, and repairing and maintaining things, then automotive engineering could be for you. Start your career with our pre-trade programme to gain a clear advantage when you go out looking for a job or apprenticeship. Continue your apprenticeship training as a NMIT Managed Apprentice while working in the automotive industry.
